

Usenet PW Extractor

Skript Sourcecode

Filename: **usenet_PW_extractor.ps1**

```
# initialize the items variable with the
# contents of a directory
$download_folder = Get-ChildItem -Path
"E:\_userdata\michael\Downloads\Gorbit Downloads"
$PW_file = "E:\pw.txt"

# delete existing pw, file
Remove-Item $PW_file

# enumerate the items array
foreach ($item in $download_folder)
{
    # if the item is a directory, then process it.
    if ($item.Attributes -eq "Directory")
    {
        # extrat PW from filename
        $item.Name -match "{{(?:<content>.*)}}"
        $PW_result = $matches['content']

        add-content -path $PW_file -value "$PW_result"

        #Write-Host $PW_result
        #Write-Host $item.Name
    }
}
```
